

# INTERESTED IN MAKING REAL COST SAVINGS?

## COST SAVINGS THROUGH FREE RESOURCE EFFICIENCY SUPPORT

**Is your business interested in making cost savings? We can help you.**

**Invest NI are offering free energy and resource efficiency audits** to companies in Northern Ireland. The audit, which is carried out by a technical specialist, will provide an holistic overview of the efficiency of operations and will seek to identify 'with a fresh pair of eyes' where improvements could be made based on best practice techniques and industry benchmarking (where available). **Outputs from the audit include a detailed report and provision of a tailored and prioritised action plan for implementation of the identified cost saving opportunities.**

Once the Integrated Audits have been completed and the report and action plan received, an Invest NI Technical Advisor is available to discuss with you the results of the audit reports and to determine any priority actions /potential projects warranting further implementation support. **Up to 5 days free technical consultancy support** can then be provided on a project by project basis to progress 1 or more actions from the audit reports. Financial support in the form of interest free loans or grant may also be available for some projects subject to meeting criteria.

To be eligible for this support companies must have a minimum spend of £30,000 on resources.
